

The ADR 3000

Automated Drive Recorder

Eco Drivers Tel: 07894312540. ecodrivers.org

ADR 3000

- Compact and easy to install
- Digital video and Audio Recorder
- Continuous recording with dual camera
- Records in a loop and GPS speed and location data
- Built –in 3G sensor for accident reconstruction
- Built in playback software on the SD memory card
- Infra-red for night driving

Benefits

- **Validate that driving procedures are adhered to**
- **Save video of unusual driving habits**
- **Record speed and position**
- **Mark any driver noticed events**
- **Low cost- Price that is affordable to everyone.**

Main Features

The ADR is the black box for the vehicles, unlike other recording system, the Automated Drive Recorder is used to record video and audio data in a continuous first in first out loop fashion. If the vehicle is involved in an accident such as a collision, impact and sudden acceleration, related incident, this data is marked and stored onto the SD card. One may thereafter analyze the data to find its root cause by playing back the scenes of interest and where acceleration, vehicle speed, direction, and location are available for review.

Continuous recording The video and audio data from the front and interior views is continuously recorded while power on. When the capacity of the SD card has been reached, the older files are overwritten by the latest file.

Pre and post event recording When impact or unusual acceleration or deceleration is detected by the built-in G-Sensor and has exceeded the preset limit or one activates the emergency record button, the recorded video data is locked-in and is erased only by an authorized party. Event data records 1 minute before and 1 minutes after. (User may set pre-event time 1 minute, 2 minutes or 3 minutes). Stored event recording data in SD card will not be erased unless user cancels the event (in-car), or the files are erased by the person reviewing the SD card.

Driving Instructors and trainers may use this device as a training aid. SD cards can be issued to students to take home and review their driving lesson on their own computer. Bringing their SD card to every lesson will lead to a higher pass rate for the instructor.
